RIVERBUCKET

TECHNICAL DATA SHEET WEEDING/MOWING BUCKET

RIVERBUCKET

RIVER BUCKET is a sturdy professional mowing bucket, useful in reclamation work, for cleaning the banks of canals, rivers, water slides, dams, etc. It can be completely submerged under water to cut and remove any type of vegetation present, in order to avoid the obstruction of the regular flow of water. It is equipped with quick couplings for quick hooking to the boom, a mechanical tilting system for self-leveling, a hydraulic jack that regulates its inclination and strong tungsten carbide cutting blades moved by an orbital motor with eccentric movement. River Bucket is entirely made of high-resistance Hardox® steel and available in three different working widths: 79" - 98" - 118".
